# OIL TEMPERATURE FOR ROTAX ENGINES 912UL. Diameter 57mm. °F IM-557

### Preface

The IM-557 instruments have been designed especially to measure the OIL Temperature in Rotax<sup>®</sup> engines 912UL (80HP).

The IM-557 is available in 52 mm size.

The instruments have been designed to work with both 12V and 24V systems.

The minimum instrumentation requirements for BRP ROTAX<sup>®</sup> four stroke engines include a gauge for the continuous Oil Temperature monitorization.

# **General Information**

ATTENTION : The IM-557 has not undergone any safety or durability examination to Civil Aviation standards but does incorporate the latest technical development and has been thoroughly tested. Despite the Tachometer being a precision instrument, false indication or misinterpretation of data could occur. By utilizing this instrument the user acknowledges the possible danger and responsibility for all risks.

#### State of receipt

Instruments packed
in a plastic bag
4 attachment screws
3 Loose plugs

# Technical data

| Case:                                    | Plastic  |
|--|--|
| Weight:                                  | 220g   |
| Suitable for:                            | Rotax 912 VDO Sender   |
| Power Supply:                            | 1030VDC  |
| Power Current:                           | 0.1 Amp. Max.  |
| Scale:                                   | 100300 °F  |
| Subdivision scale: 2ºF                   |  |
| Max. Deviation:                          | 2%   |
| Dimensions:                              | See sketch   |
| Calibration:                             | Calibrated by the<br>manufacturer prior to                                       |
|  | shipment.  |
| Red Zone*<br>Yellow Zone*<br>Green Zone* | From 100 to 120°F & 280 to 300°F.<br>120 to 190°F & 230 to 280°F<br>190 to 230°F |

\*Please refer to the updated User Manual of your engine BRP-ROTAX<sup>®</sup> engine for the operational limits

#### Installation Instructions

- Install instruments in pilot's field of vision, free from vibration and glare.

- Protect the instruments against dampness and any kind of gasoline or acid.

- Pay attention to installation dimensions

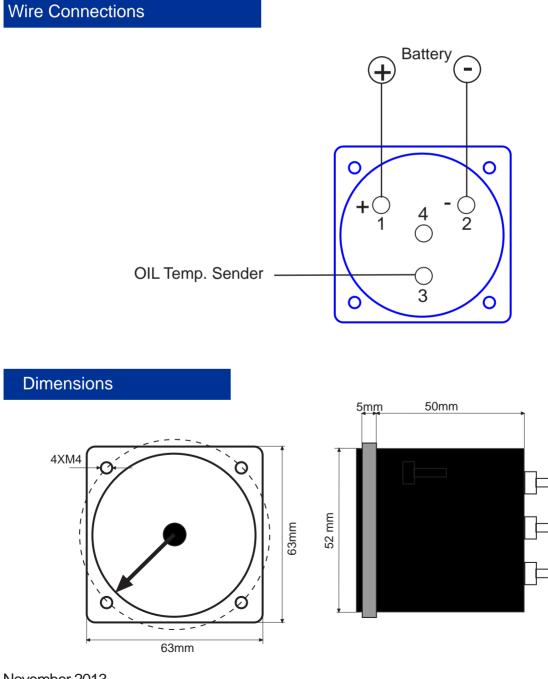

- Wiring has to be carried out with good quality plastic-sheathed cable.

- When routing cables, prevent possible damage to cables from heat, vibration, shearing or crushina.

- Install a breaker or fuse of 1 Amp.

Instruments Terminals

- 1) (+) Red wire to positive terminal of battery.
- 2) (-) Black wire to negative terminal of batery.3) Input to the CHT Sender.
- 4) Factory calibration input.

#### **Test & Calibration**

The VDO sender is a resistance which varies with the temperature.

To check the instrument your need a 1K potentiometer and multimeter. Adjust the potentiometer to the multimeter read 62.2 Ohm. Being careful not to turn the potentiometer, connect according to Figure 1.

With 212 Ohm, the instrument should show 100 °F. Try with other resistance values.
